

# 3 Kokutai

## P-1

**April 2019**

### Introduction

3 Kokutai, based at Naval Air Facility Atsugi, is the first squadron in the JMSDF to be equipped completely with Kawasaki P-1s. This squadron was represented in an earlier release as a mixed unit with P-1 and P-3 aircraft. The included paints and flight plans represent it's current full strength with only P-1s.

You will need the [JYAI Kawasaki P-1](#) model.

### **\*\*Legal disclaimer\*\***

I of course have no association with the JMSDF, or as far as I know secret spies within the JMSDF. This package is based entirely on publicly available photographs and lots of Google Earth magic. Also, if your computer bursts into flames, melts, has a hard drive crash, decides to play Global Thermonuclear War, or acts odd in any other way after installing this scenery...we didn't do it. Seriously, don't blame us. This package must never be uploaded to any website that charges for access or downloads nor may it be distributed in any manner for compensation.

This Project was initially created for internal distribution among forum members on MAIW forums along with many other works. This project or any of it's contents are never to be distributed for any form of compensation and requires direct express permission from it's creators for any form of distribution.
