1. About

About this package

This freeware package, produced by [Military AI Works](#), contains the flightplans previously released in separate AI packages in one convenient archive.

This first version focusses on all MAIW packages that include F-16 and P-3 traffic. The traffic files in this package can be used together with the F-16 and P-3 aircraft conversion packages released in our Download Hangar. A future update will bring all traffic files ever released in MAIW packages.

The traffic files are available in FS9 format for use in Flight Simulator 2004 (FS9) and in FSX format for use in Flight Simulator X (FSX) and Prepar3D (P3D).

For the advanced user, we have also included the uncompiled text files. They are only to be used with a traffic compiler. You don't have to copy these files to your sim.

About the traffic files

The traffic files from the original MAIW packages were split per unit for easier management of your traffic. This is why the traffic files are also included in FS9 format.

The reasoning behind the splitting and our methodology are thoroughly explained in the file "MAIW Flightplans Changes.pdf".

About MAIW

Military AI Works (MAIW) is a loosely affiliated, international group of flightsim enthusiasts who share the common goal of seeing realistic military AI traffic in Microsoft Flight Simulator and Lockheed Martin Prepar3D.

Our goals:

1. Produce only high-quality, freeware packages and products
2. Create military AI traffic accurately within the bounds of MS Flight Simulator and LM Prepar3D
3. Promote new freeware military AI models, scenery and products
4. Advance military AI modeling of countries around the globe
5. Respect the rights of designers and contributors.

To learn more about MAIW, visit our website at <https://militaryaiworks.com>.

2. Installation

How to install this package

This package is intended as a simple replacement for all our MAIW packages containing F-16 and P-3 traffic.

1. In case you already have any of the related original MAIW packages please **make sure you remove the appropriate files**. A full list of original file names is included as "MAIW Flightplans Original File Names.pdf".
2. FS9 users move the contents of the "FS9" folder to their "Scenery\World\Scenery" subfolder.
3. FSX users move the contents of the "FSX" folder to their "Scenery\World\Scenery" subfolder.
4. P3D users can use the FSX method above. However, P3Dv4 users also have the option to use the new addon installation method outside the main P3Dv4 folder. Please refer to the P3Dv4 documentation on how to do this.
5. Store the txt files somewhere safe in case you want to make changes to the traffic and recompile.
